

# GRAPHTEC FC9000

## Updating Firmware

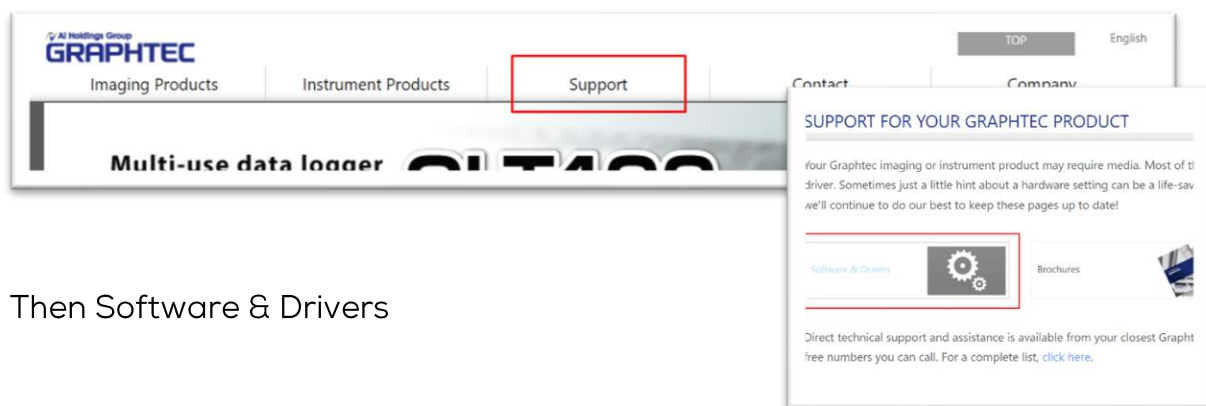

### Graphtec Updating Firmware

Updating any software or firmware for Graphtec cutters needs to be done via the following website: <http://www.graphteccorp.com/>

**IMPORTANT NOTE:** NEVER use the American Graphtec site for downloads or you will run into issues and may cause permanent damage to your equipment.

Once on the correct site navigate to the Support (top of the screen)

Then Software & Drivers

Then in the list find the Firmware link and download to a spot you can easily locate.

A screenshot of a table on the Graphtec website listing products and their associated software. The table has columns for "Plotting Plotters", "Drivers (TM)", "Firmware", and "Softwares". The "Firmware" column for the "9000" model is highlighted with a red box, showing "Ver.1.32 NEW".

Plotting Plotters	Drivers (TM)	Firmware	Softwares
	[Windows 10/8.1 32-bit Edition Ver.4.00 [Windows 11/10/8.1 64-bit Edition Ver.4.00	Ver.1.32 NEW	Graphtec F Graphtec S Cutting M. Cutting M. Graphtec F

In the downloaded files there will be a pdf with installation instructions. The update process is different on older models, they will have their own instructions when you download the relevant firmware. Follow through the Relevant PDF in case of any changes in process.

Key Points;

- Get the correct download from the correct website - <http://www.graphteccorp.com/>
- Firmware can only be upgraded via USB connection.
